

TITAN
COMMUNICATION SPECIALISTS

The Communicator

The Communicator is an audio SIP softphone for Windows 2000 XP that is tightly integrated with the hosted platform. The Communicator has access to many advanced VoIP features such as video services, complete call control, and messaging/voicemail integration.

The Communicator Overview

The Communicator is a feature-rich desktop application that allows users and businesses to utilize the application as a primary or secondary phone device for their IP communications services. As an integrated device with the platform, we are able to auto provision the application, provide automatic updates, and version management seamlessly through our servers. A key benefit of integration for users is the central storage of contacts, eliminating the need to duplicate contact lists.

Communicator Options

Service providers marketing the Communicator can customize the user interface through configurable skins to represent their own brand. RESELLER also offers two Communicator options to best fit the needs of a provider's service portfolio and customer base.

The Communicator: Audio only, including all the calling, notification, messaging, and contact features.
