- Multiple auxiliary analogue lines - connect an analogue phone system using one main shared phone number and a number of additional lines to manage capacity.
- ISDN2 - ideal if you require capacity for 2 – 6 simultaneous external voice/data calls using 1 – 3 lines.
- ISDN30 - great for organisations requiring capacity for 8 or more external voice/data calls at the same time
- SIP Trunking (Session Initiated Protocol) - the standard for voice calls over IP networks
