

# Going Green

## Go “Green” with Environmentally Friendly Solutions From Wavenet

Reduce your businesses carbon footprint through: -

- Reducing Travel
- Power Efficient Technology
- Flexible / Home Working
- Conferencing

Wavenet has partnered with suppliers with a green focus. One of the largest growth areas within our business is flexible working. At Wavenet we practice what we preach with a quarter of our employees having home working functionality. This enables them to achieve a greater level of work-life balance. This flexible approach means that for every employee that works from home it prevents 834lbs of CO2 from entering the air.

We work closely with our business partners to make sure all old technology is disposed of in an eco friendly and WEEE compliant manner. In addition to this we work closely with our customers to ensure that we maximise the lifespan of their systems, thus protecting their investment and the environment.

As a supplier and user of technology ourselves we are continually looking for ways to reduce our carbon footprint even further.

# Going Green

## Why Wavenet

- Intelligent Migration
- “Green Technology”
- Presence & Availability
- Flexible / Home Working Solutions

### Intelligent Migration

The best way of reducing emissions is to build on your existing architecture rather than completely replacing it. Our solutions are tailor made to allow you to extend the life of your existing PBX while taking advantage of the IP communications & the benefits it brings.

### Presence & Availability

Whether in the office, at home or on the move our presence & availability solutions will enable your business to significantly reduce its carbon footprint and also benefit from improved staff productivity

### Flexible / Home Working Solutions

Each employee that works from home 1 day per week prevents 834lbs of CO2 from entering the air. By introducing flexible working practices within your business you will Reduce carbon emissions and also improve the work/life balance for your staff benefiting from a more productive & motivated team.

### Voice & Video Conferencing

Create virtual meetings instantaneously without the need for expensive third party systems. Conduct business with colleagues, suppliers and remote staff regardless of location.

### Remote Supervision of Staff

A key issue when implementing flexible working practices is remote supervision of staff our applications remove this issue and provides full presence & availability capabilities of your staff activities backed up by a full reporting package.

Used in conjunction with Wavenet’s voice grade broadband service this provides an optimal means to supervise staff who work from home.
